

LOQIT

Secure Phone Ownership & Recovery System

Helping citizens and law enforcement recover lost & stolen phones.

01

The Problem

Hundreds of thousands of smartphones are lost or stolen every year — and very few are ever recovered.

- Once a phone is offline or in a stranger's hands, owners have no reliable way to locate it.
- No trusted, privacy-safe channel exists between an honest finder and the real owner.
- Law enforcement lacks a unified system to verify ownership and coordinate recovery.
- Device fraud (duplicate IMEIs, resale of stolen units) goes largely undetected.

The Solution — LOQIT

LOQIT is a full-stack platform that bridges citizens and police to register, protect, and recover devices.

- Register devices and report them lost/stolen with live status tracking.
- BLE (Bluetooth Low Energy) detection finds nearby devices — even offline — via a crowd network.
- Secure, privacy-safe finder–owner chat with AI risk scoring to block scams.
- Dedicated police portal to verify ownership, manage cases, and detect fraud.

Market Opportunity

- 1.2 billion+ smartphone users in India; tens of millions of devices lost or stolen annually.
- Rising demand for anti-theft, device-recovery, and SafetyTech solutions.
- Strong fit with government Digital India, public-safety and law-enforcement initiatives.
- Dual market: B2C (citizens / device owners) and B2G (police & government agencies).
- Adjacent expansion: insurance verification, second-hand device authentication, enterprise fleets.

04

Product Demo / Web Platform

Civilian dashboard and police command center — one platform, two roles.

Civilian Dashboard

Police Command Center

04

Product Demo / Mobile App

Native mobile app with BLE detection — protect, track, and recover on the go.

05

Key Features

- Device registration with duplicate-IMEI fraud detection
- BLE detection — find devices even when offline
- Finder–owner chat with AI auto-risk scoring
- Police portal: case assignment workflow & analytics
- Lost / stolen reporting with live status tracking
- Live map of device locations & beacon history
- Anti-theft mode: SIM-swap watch, motion, camera capture, BLE broadcast
- Role-protected access for civilians and officers

Technology Stack

- Mobile: React Native + Expo SDK 55 with BLE libraries (EAS cloud builds).
- Web dashboard & landing: React + Vite + Framer Motion (TypeScript).
- Backend: Supabase — Auth, PostgreSQL, Realtime, and Edge Functions.
- AI: Groq API (Llama-3.3-70B) for chat risk and fraud analysis.
- Maps / Geocoding: LocationIQ and Leaflet.
- Core tech: Bluetooth Low Energy (BLE) crowd-detection network.

Competitive Advantage

- Two-sided platform — the only solution connecting citizens AND law enforcement in one system.
- Works offline via BLE crowd-detection, unlike GPS-only 'Find My' tools that fail when the device is off-network.
- Built-in AI fraud & scam detection on finder–owner communication.
- Duplicate-IMEI detection deters resale of stolen devices.
- Privacy-first design protects both finder and owner identities.
- Aligned with government & public-safety mandates — natural pilot partner for agencies.

Current Progress — MVP

LOQIT is at the MVP stage with a working, demonstrable product.

- Built: web dashboard, civilian portal, and police command center.
- Built: BLE detection, live map, AI risk scoring, anti-theft mode.
- Built: animated public landing page and onboarding flow.
- Mobile app builds and runs via EAS.
- Next: pilots, real-user testing, and scaling the detection network.

09

Roadmap

Now — MVP

Working web + mobile product, core recovery & anti-theft features.

Next 3–6 months

Pilot programs, real-user testing, scale BLE crowd-detection network.

6–12 months

Deeper police integration, verified ownership records, enhanced AI fraud detection.

12 months+

Public launch, B2G partnerships, expansion to insurance & device authentication.

Team

A solo founder-led venture — built end-to-end with modern AI tools and open-source technology.

Rohit Zore

Founder, Builder & Product Vision

Conceived and built the entire LOQIT platform — mobile, web, backend and AI — single-handedly.

How LOQIT is being built

- Solo founder — driven by a clear product vision for safer device ownership.
- Built with AI-assisted development tools for rapid, high-quality engineering.
- Leverages open-source and modern cloud (React Native, Supabase, BLE).
- Lean and capital-efficient — a working MVP delivered without a large team.
- Actively seeking co-founders, mentors and contributors to scale.

Our Ask

We are seeking support to take LOQIT from MVP to real-world impact:

- Mentorship — product, go-to-market, and public-safety domain guidance.
- Incubation — workspace, resources, and the MSSU i-Spark ecosystem.
- Partnerships — police, government agencies, and device ecosystem players.
- Pilot Programs — deploy LOQIT with a city / agency to validate at scale.

LOQIT

Recovering devices. Restoring trust.

Thank you • Let's build the future of device recovery together.
